

# OSS-Next Completion Audit — Task List

Generated 2026-07-24 · Branch `integrate-wp-render`  
Living source: `docs/audits/AUDIT_REQUIREMENTS.md` §6 · Previous export: `AUDIT_TASK_LIST_2026-07-21.pdf`

**Event-driven pass, not a full three-dimension re-run.** Records this session's checkout hardening, the maintenance wall, and a batch of client answers. Scores are a delta on 2026-07-21; a full methodology pass (§3 of the requirements doc) is still owed.

## Scores

| Dimension                              | 07-24 | 07-21 | 07-18 | 07-15 |
|----------------------------------------|-------|-------|-------|-------|
| Overall (blended)                      | ~83%  | ~81%  | ~79%  | ~65%  |
| Functional Completeness (8 areas)      | ~90%  | ~88%  | ~87%  | ~62%  |
| E-Commerce Feature Coverage (41 items) | ~64%  | ~64%  | ~62%  | ~65%  |
| Core Web Vitals / PageSpeed / SEO      | ~91%  | ~91%  | ~89%  | ~68%  |

**Progress:** 49 done · 1 partial · 6 open (was 42 / 0 / 12 on 2026-07-21)

## Closed This Session

- **Payment: client-controlled charge amount** — now recomputed server-side; verified in the Braintree sandbox (attack → 409, honest purchase charges the right total).
- **Payment: charged-but-no-order** — dedicated recovery screen with the transaction reference, no re-charge risk.
- **PDP crash on the new ratings object** — `normaliseRating()`; two of the five call sites had been failing silently.
- **PDP aggregateRating JSON-LD** — now emitted (review count exists).
- **WordPress theme CSS repainting the app chrome** — scoped to `.wp-content`; also fixed a silent drop of the whole stylesheet on malformed CSS.
- `middleware.ts` → `proxy.ts` — Next 16 convention; A/B test verified still running.
- **Converted-title double-branding** — `seo_title` marked absolute.
- **Order confirmation emails** — client confirmed Django owns them.
- **Address book** — client confirmed edit-address stays singular; not a gap.

## New This Session

### Maintenance wall (client-requested capability)

Site-wide 503 maintenance mode gated in the proxy, so it covers native and WP catch-all routes uniformly (verified). Env kill-switch + runtime Redis toggle ( `POST /api/maintenance` ) + a browser control page at `/maintenance-control`, with an admin bypass cookie. Fails open if Redis is unreachable. Full on→off cycle verified live.

## **PARTIAL** Newsletter — registered-user half built

`/my-account/newsletter` (subscribe / unsubscribe, in the account nav). State is authoritative — reads the profile's `is_subscribed` flag (which our normalizer had been dropping) and writes it back after a toggle. The public homepage widget is deferred to the new homepage design; reading a *guest*'s status by email is still a gap, but the account page doesn't need it.

## Open — High Priority

---

### BACKEND Django checkout endpoint crashes on every call

`locale.currency()` with no server locale (`app/orders/views.py:89`) — 500 on every call; the order saves before the crash. With payment now working, this is the last obstacle to an end-to-end purchase. **Not fixable from this app.**

### BACKEND Pages API serves malformed CSS

Minifier strips comment delimiters but keeps the text and emits unbalanced braces; browsers discard every rule after the fault, so the live WordPress site loses styling too. Worked around with a tolerant parser here; the source needs a Django-side fix.

## Open — Client Decisions

---

### CLIENT Homepage quote form silently discards leads

Shows "✓ Quote Request Sent" while the data goes nowhere. Fix is Zoho Forms — waiting on account details. Interim: disable the form or drop the success message.

### CLIENT Site advertises live chat that doesn't exist

Trust strip promises "Phone, Email & Chat." Decide to build chat, or approve a one-line copy change (needs no engineering decision).

### CLIENT No shipment tracking number in order history

Status shows, but no carrier/tracking number exists in the data. Needs a product decision and likely a new backend field.

## Known and Deliberate — No Action Requested

---

- **PLP cards don't set an image priority hint.** The cards render through the search library's list component, which exposes no item index; marking the first card would mean replacing it and risking pagination/empty-state regressions, for a minor hint on post-hydration content. Left as-is on purpose.
